

Energize your screen with

Magic Touch™

Your **BEST BUY** for Touch Screen Solutions

KEYTEC®, INC. Home of the Magic Touch - A Touch Screen Technology Pioneer Since 1987

KEYTEC'S Magic Touch products can be used to run ANY mouse-driven program for Windows, Macintosh and Linux, and the mouse can be used concurrently. Magic Touch can be activated by a finger, fingernail, gloved hand or stylus. The touch screen controller gets power from computer's USB or serial port, so it can be used in any country without needing a special power adapter. Magic Touch screen also shields radiation and eliminates static.

Add-On Touch Screen Kits

This award-winning product is the most unique and least expensive touch screen available on the market. It can instantly convert your standard monitor or notebook computer into a touch-interactive device. Standard models are available for 13 to 20" LCD/CRT, 21" CRT monitors and 12-15" notebook computers. Custom size is available up to 80" (16:9 ratio).

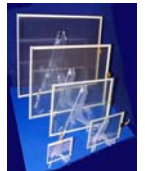

Integrated Touch Monitor

This complete touch solution is offered by integrating the Magic Touch built-in kits into monitors of the highest quality, with excellent workmanship and extended burn-in testing. Standard models are available from 17 to 21" CRT touch monitors and 6.4 to 19" LCD monitors (desktop & open frame). External USB or serial controller is used for easy maintenance. Custom and OEM integrations are available.

Built-In Touch Screen Kits

The built-in touch screen kits are designed for system integrators and OEM manufacturers who can integrate KEYTEC'S touch screen into their own systems. The standard models are available from 3.9" to 19" for LCD and 15" to 21" for flat CRT displays. Custom designs are welcome. The mechanical drawings of each standard model and a custom design check list can be downloaded from <http://www.magictouch.com/builtin.html>.

Touch Screen Controller

KEYTEC'S unique external controller design offers high resolution with 2048 x 2048 touchable points, plug-n-play USB-X controller connects to an USB port and is compatible with Win 98, ME, 2K, XP, Linux & Mac (optional). Pro-E-X controller connects to a com port and is compatible with Win 95, 98, NT 4.0, ME, 2K, XP and Linux. Special controllers are available for OEM customers.

View Touch (NEW)

At KEYTEC, magic never ceases. **View Touch** is a newly developed innovative product for touch-interactive

applications. Instead of using a finger or stylus to activate the touch function, View Touch is operated by a laser pointer. The light spot of laser is monitored by a digital light sensor to control all the mouse functions. This unique invention breaks the boundary of size limitation for touch-interactive applications. It is indeed one-size-fits-all, and thus provides the most economical way of creating a user-friendly input device for large-screen displays. The **View Touch** is obviously very suitable for presentation and virtual reality type applications, the developers will find it useful for many other conventional and unconventional applications. See product details at <http://www.magictouch.com/ViewTouch.html>.

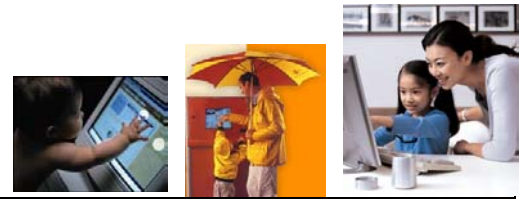

Magic Touch does so much....

Multimedia Kiosk, Point of Sales, Machine Control Panel, Assistive Technology for Special Needs, Early Childhood Education, Home Theater and Entertainment, Home Automation, Navigation System, Voting Device, Library Automation, Orientation and Training System, Automatic Teller Machine, Business Presentation, Graphic Tool, Gaming Machine, Pen Computing.... (Please see model selections on the other side).

It's never too early to bring the Magic Touch into your life.
